

SOLIDS HANDLING PUMPS

NIJHUIS
POMPEN

Applications

- wastewater
- raw sewage
- sewage effluent
- sludge

mercury

A world of pumping experience

Mercury

The Nijhuis Pompen sewage pumps have an international reputation for their solid handling capacity combined with high efficiencies.

Hydraulic design

Nijhuis Pompen sewage pumps series (E)RW (horizontal) and (E)RWV (vertical) are available with a single channel impeller as well as a double channel impeller, both types have wide impeller passages of at least 120 mm, which provide an extremely smooth resistance-free path for solids.

Mechanical design

By using oversized shafts and by reducing overhang, shaft deflection is reduced to a minimum. This eliminates shaft failures and increases packing life.

The stuffing boxes are designed for grease or water lubricated soft packing or single/double mechanical seals.

The clearance between impeller and wear plate is kept to a minimum in order to avoid accumulation of solids.

Mercury

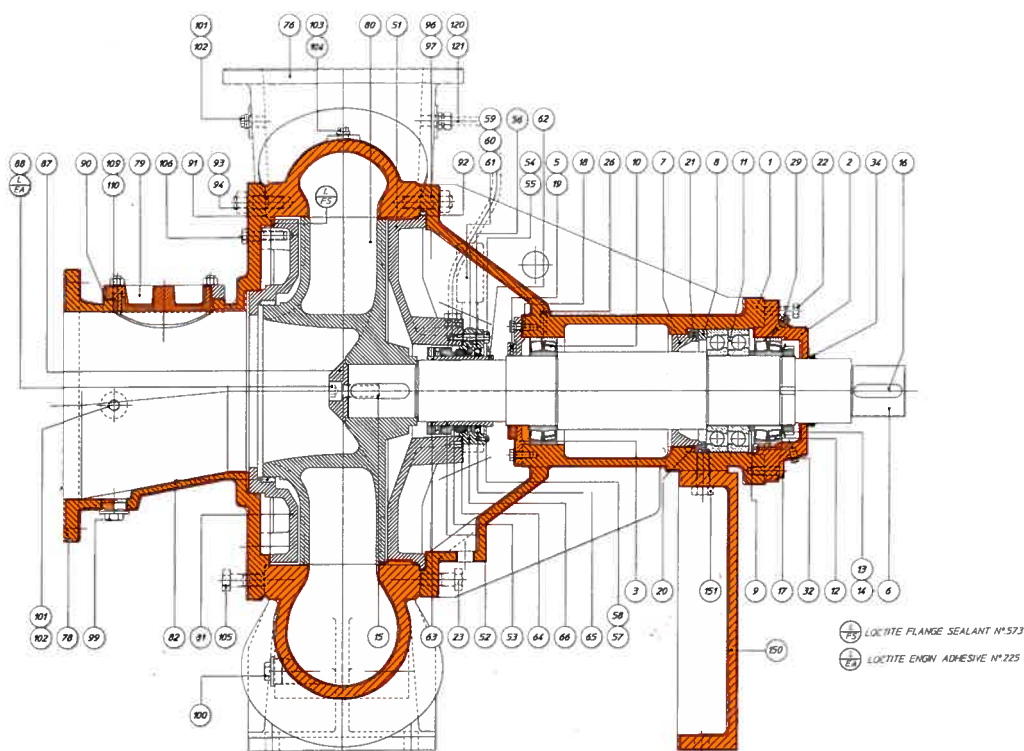

All pumps have a back pull out design, which allows pump inspection without the need to disturb pipework and valves.

The pump casing is designed with an access hole that permits internal inspection of the impeller.

Standard materials

Nijhuis sewage pumps are available in the materials:

- cast iron
- ductile cast iron
- ni resist 2b and D2b
- bronze and aluminiumbronze
- stainless steel

Worldwide Sales and Service Organizations

Nijhuis Pompen has a network of agents and service centres throughout the entire world manned by experts in pump technology. These experts are abreast of current developments in the field, have access to up-to-date documentation and can provide customers with the information and technical advice they may require.

Direct links with head office in Winterswijk, the Netherlands, are maintained via modern communication techniques.

Financially attractive service and maintenance contracts guarantee that defects in pumping installations are kept to a minimum. Nijhuis Pompen offers you peace of mind through sustained reliable operation and problem free production. In other words, when you choose Nijhuis Pompen you choose over 60 years of experience in building pumps to customer specification as well as the certainty of a smooth running operation.

Quality Products

Customers who ordered pumps from Nijhuis Pompen at the beginning of the century are still regular customers, giving an indication of how much they appreciate good and lasting relations.

The Nijhuis Pompen quality assurance programme is certified by Lloyd's according to ISO 9001 and guarantees that all of its products and services meet all international standards.
