

Specialist for Pumping Technology

INNOVATION EFFICIENCY QUALITY

For more than 60 years the name Ruhrpumpen[™] has been synonymous worldwide with innovation and reliability for pumping technology

The Ruhrpumpen Type SPN is a vertical, process design, radial split, volute type, single stage, single suction, close coupled design, suction and discharge position: inline pump type OH5, according to API 610, latest Edition. Ruhrpumpen has many years of experience in design, manufacture, quality assurance and operation of process pumps under heavy and medium duty conditions. Due to the direct installation in the pipeworks and the easy maintenance this pump range has a wide application range.

SPN Design

Vertical, one stage, single suction centrifugal pump according to API 610, latest edition, with mechanical seal in accordance with API 682. The pump is driven by an electric motor and the impeller is mounted directly on the extended shaft of the electric motor. The pump is suitable for being directly mounted into the piping without the need of a baseplate. This inline pump range has been developed in strictly accordance with the latest SHELL DEP Specification referring to the API 610 and the BS 4082.

Construction

MODERN AND ROBUST DESIGN

Pressure tight and accurately shaped casing/casing covers are the result of progressive pattern, moulding and casting technique. Trend setting designs and precise machining with permanent and independent quality assurance ensure extreme reliability and long life.

Reduction of radial loads, thereby increase of bearing and shaft seal life through reduction of deflection by proper design of volutes The corrosion allowance for the wall thickness on the casings and casing covers is 3.2 mm or more. All pumps are equipped with casted flanges acc. to ASME B 16.5 300lb, alternatively acc. to EN 1092-1, PN40. For special conditions all relevant ASME- or EN/ISO-7005-1 flanges are available.

IMPELLER

Single-suction, closed, one piece, cast impeller, with replaceable impeller ring and balancing holes near the hub. The impellers display high efficiencies and low NPSH-values.

DRIVERS

Driver and pump are forming a complete unit. The standard design for these drivers are vertical flanged motors with special shafts and bearings. The material selected for the shafts is in accordance with the API 610, latest edition. The electric motors are in accordance with SHELL DEP Regulations, VIK design specifications and DIN-ISO, DIN-EN, IEC, VDE.

BEARINGS

For this kind of vertical inline pump, axial and radial forces are absorbed through motor bearings. Therefore the electrical motor is equipped with one radial roller bearing and one axial thrust bearing.

TEST PRESSURE

Pump casing/casing cover will be tested to 1.5 times the maximum working pressure.

DIRECTION OF ROTATING

Clockwise viewed from the driver end.

n = 1,480/2,960 rpm 50 Hz

Selection Charts

The SPN charts are covering 19 pump models with several sets of impellers, especially designed or 50/60 Hz applications. Our continuous development process allows the extention of the SPN program with taylor-made hydraulics to meet customer's requirements.

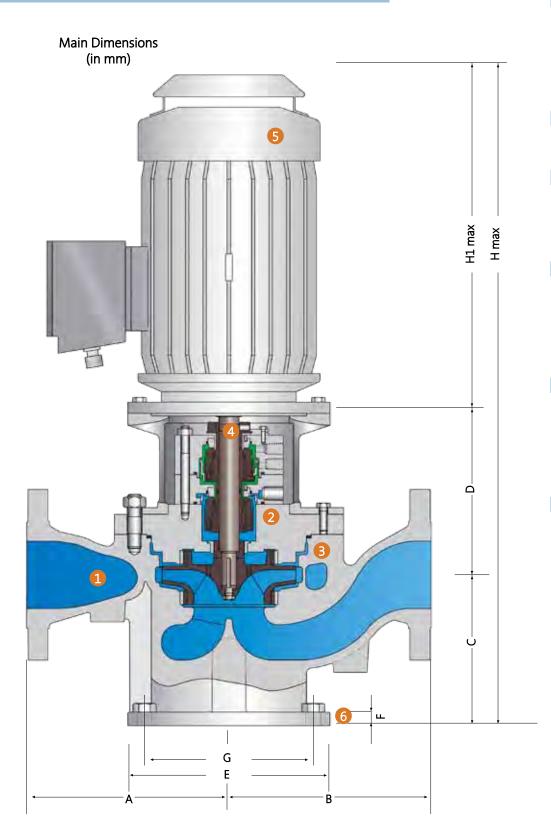

200

Characteristics and Design Features

- 1 19 volute casing inline pump sizes for 50 Hz and 60 Hz power supply, in top pull out design from 1 1/2" to 8" discharge nozzle, acc. to API 610, latest Edition, BS 4082 and Shell DEP latest edition.
- 2 Mechanical seal chamber dimensions in full compliance with API 610 and API 682.
- 3 Casing/casing cover in metalto-metal contact. Nonasbestos spirally wound gasket made of stainless steel /graphite foils totally enclosed.
- 4 Shaft deflection of less than 0.03 mm in the stuffing box area is achieved by correct sizing of the bearings and the use of double volutes. Low vibration values will be achieved.
- 5 Antifriction bearings with an operating life of more than 25,000 h. Special double angular contact bearings in the motor are available for compensation of high axial forces.
- 6 Foundation support is possible with a separate foot-plate.

PERFORMANCE RANGE

Capacity	0	up to 550 m³/h	up to 2420 gpm
Head	Н	up to 280 m	up to 656 feet
Temperature	t	up to 260° C	up to 500° F
MAWP	р	up to 40 bar	up to 580 psi
Speed	n	1480/2960min ⁻¹	1780/3560 rpm

Note: For pump operation outside this range, please contact a Ruhrpumpen representative.

BROAD APPLICATION RANGE

The SPN inline pumps are a wide range of heavy duty centrifugal pumps for operation in process industry and transfer systems. The range is designed for all process fluids and process conditions.

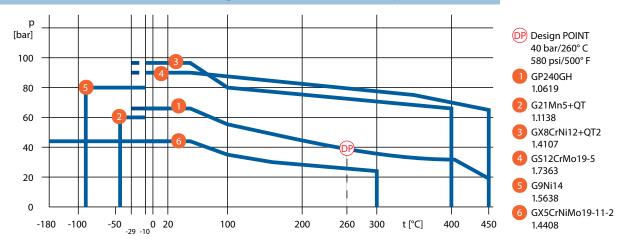

- Oilfields and Terminals
- Refinery Oils
- Transfer Systems
- Process Industry
- On/Offshore

Dimensions

Please refer to drawing in page 4 for these dimensions. All dimensions are in inches.

* For pressure-retaining parts. For impellers, ASTM A 743-CA 15 applies, among others.

Other Ruhrpumpen Products

Single Stage Horizontal Pump

Overhung, radially split, flanged connections, enclosed impeller, mechanical seal. Standard construction materials according to API latest edition (type OH2). Municipal, General Industry, Irrigation, Fire Service and Pressure Equipments.

Volute Casing Centrifugal Pump

Axially split, horizontal single or double stage, double volute casing, double suction, radial, closed impeller. Heavy duty process design according to API 610 latest edition (type BB1). Pipeline service-mainline and booster, Oil Extraction, Refinery, Chemical, Petrochemical, Metallurgical and Power Stations.

Vertical Barrel Pump

Low NPSH "Shockless Entry" first stage impeller (single or double suction), Single or multi-stage. Standard construction materials according to API latest edition (type VS6). Condensate, Power plants, Municipal, Hydrocarbons,

Horizontal Process Pump

Pipeline and Refineries.

Axially split, horizontal multistage centrifugal pump. Near centerline mounted. Heavy duty process design according to API 610 latest edition (type BB3). Refinery, Oil Fields, Petrochemical, and Chemical Applications.

With every project you can count on QUALITY, SERVICE, EXPERTISE, INNOVATION and COMPETITIVENESS. Because we have a commitment to each customer, the community, and the world. We are Ruhrpumpen, the specialist for pumping technology!
